

Front End Developer Task

Time Limit:

3 – 5 hours

Aim:

Create simple contact form using the JSON feed provided.

Requirements:

1. Display title above form select dropdowns using the “name field”
2. Drop downs should have options set using options defined in JSON feed
3. Display form inputs (name, email, message etc) after select option is clicked

Bonus Points:

- Adding a radio group or similar for contact preference
- Bootstrap form styling
- Accordion animations
- General front end “wow factor” finishing touches

Example Layout:

Sales or Product Enquiries

Please select ...

Customer Service Enquiries

Please select ...

Example JSON Feed:

```
{ "forms":  
  [  
    {  
      "name": "Sales or Product Enquiries",  
      "options": [  
        "General enquiry",  
        "Quote request"  
      ],  
      "contact": [  
        "Email",  
        "Telephone",  
        "No contact"  
      ]  
    },  
    {  
      "name": "Customer Service Enquiries",  
      "options": [  
        "General enquiry",  
        "Quote request"  
      ],  
      "contact": [  
        "Email",  
        "Telephone",  
        "No contact"  
      ]  
    }  
  ]  
}
```

Tip:

The page will need to be accessed via localhost either with a local dev environment or Live Server IDE plugin to prevent a CORS error.
